Subject: Glyphosate
Date: Thursday, May 25, 2017 8:52:27 AM

How can you continue to ignore the independent science that Glyphosate poses health risks. There is no safe Level in human beings. It is ridiculous to even think that any chemicals whether Glyphosate or others are safe in the human body. As

More and more toxic chemicals are used in our foods, manufacturing, the environment etc., the incidence of disease and sickness continues to rise. Each new generation of children born are suffering with numerous health issues. This is common sense, that the more toxins we are exposed too, the more disease will result.

Do the right thing for a change and ban Glyphosate & Roundup. Transition to less toxins and natural means of pest control and crop management.

We are reaching the top of the cliff, our society is at the brink of falling off into extinction. We have to stop letting Corporations determine what is right for our Planet. We can't eat Money, we can't breathe money and money can't be the reason to continue to allow the poisoning of our Planet!

Just STOP!
